

Name: _____

Protecting the Deciduous Forest

Leaf Identification

This graphing activity is part of the Plainville Community Schools WebQuest "Protecting the Deciduous Forest." Use the leaf identification sheet and the 4H Key to assist you as you record the number of trees that fall into each category. Use tally marks to count the trees. Add up your tally marks and write the totals in the correct area. You will use your results to create a pictograph and a bar graph in Graph Club.

Type of Trees	Maple	Oak	Spruce	Birch
Number of Trees <i>Use tally marks to record your data.</i>				
Total				

Use the notebook in Graph Club to write at least two sentences which explain your observations of the graph.

As part of the WebQuest: How should the town deal with the Gypsy moth infestation? Write a short recommendation in paragraph form, in the notebook section of Graph Club. Defend your recommendation with supporting details from the graph.
